Fulvic 20 with CropPlex™ Technology functions as a complexing agent for micronutrients and provides a source of added organic carbon which is necessary for healthy crops.

- Fulvic 20 provides a lighter color for better usability on sight gauges, tanks, and equipment.
- More biologically active than conventional humics.
- Offers the highest complexing capacity for a available nutrient.
- Aids in the translocation of nutrients throughout the plant.
- Keeps nutrients readily available for uptake including N, P, and K.
- Promotes rapid early root development and seedling growth.
- Supports vigorous plant health even under high stress conditions.
- Provides organic carbon to stimulate soil microbial activity.
- Food source for microorganisms to help improve soil tilth.

**Use Rate Information:**

- Can be used alone or blended with liquid fertilizer mixtures containing micronutrients.
- Can be used with all crops including corn, wheat, sunflowers, grain sorghum, potatoes and cotton.
- Typical use rates are:
  - Soil application: 1 - 4 pints per acre applied in furrow, banded, or side dressed.
  - Foliar application: 1 quart per acre to promote adsorption.
